TECHNICAL AND INFORMATION PRESENTATIONS

November 20, Tuesday afternoon / 20. новембар, уторак после подне

14:00-14:55 Horizon 2020 project Semantic Coordination for intelligENT sensors (2CENTs)

Topic/Tema: **Live presentation of one of the results**

Presenters/Предавачи: Nenad Milošević, Zorica Nikolić and Milorad Tošić, **ELFAK Niš**

Diversity of radio access technologies, such as ZigBee, Bluetooth, LTE and Wi-Fi, together with growing requirements for their simultaneous use, significantly increase complexity of IoT wireless networks. A number of open challenges affect practical deployments, such as simultaneous use of multiple technologies, intelligent coordination of a subset of nodes, coexistence of different technologies using the same spectrum, efficient management of (simultaneously used) heterogeneous radio links, etc. SemantiC Coordination for intelligENT sensors (2CENTs) implements network intelligence on top of the FIESTA-IoT platform by reasoning for the network state estimation based on semantic technologies (ST). ST facilitates reasoning about coordination, application priority, frequency selection and dynamic spectrum access. Major achievements in 2CENTs are design and deployment of 2CENTs ontologies framework, mining module based on correlations with conclusions on network states, and Correlational Interference Analyser (CIA) application. Due to the interference between ZigBee and WiFi network, there is packet loss in ZigBee network, leading to the missing measurements data for some period of time. If two or more sensors are affected by the same interferer, the time instants of the missing data should match. The correlation of the missing/present data events for the selected pair

of sensors is explored and analysed by the CIA application. The presentation will consist of two parts. During the first part, 2CENTs project will be described with the respect of its goals and achieved results. Within the second part of the presentation, there will be a live demonstration of the CIA application operation. It will be shown how to select a pair or a larger group of sensors (shown on the city map), calculate the correlation between the sensors' data and show it graphically, and how to make conclusions based on the calculated correlations.

EXIBITION / ИЗЛОЖБА

ПТТ МУЗЕЈ, Београд

"Glasnička služba и Отоманској империји"

Карл Гебел: Татарин и срушујућа, око 1861. године (ПТТ музеј, Београд) За ову слику је дозирао Риста Прендић, да би Гебел ишљ аутентичније приказао начин преноса пошиће у Србији.

КЊАЖЕВСКИ ТАТАРИН

За Ристу Прендића је владало мишљење да је бистар, вредан, жилав и енергичан. Био је никега раста и јахао је вешто. Ово је запазио и кнез Милош и одредио је да ће од 22. августа 1835. године Риста бити татарин. Бити татарин кнеза Милоша значило је пре свега бити вераљ хнезу, бити особа од врхунског поверена, јер посао татарина је био да преноси важне дипломатске списе за Цариград, Солун, Видин, Букурешт, Травник, итд. Татари су били и део кнежеве покретне канцеларије, јер је хнезу и у путу могло да падне на памет некаква одлука. У том случају, путовњак се прекидало, колона кнежеве спите се заустављала и писар би на лицу места састављао писмо, које би кнежев татарин одмах, у пуном трку однео у одредиште.

Риста је држao до свог изгledа, кад је био у служbi. Ево описа његове одеће: „Одело Татар-Ристино било је врlo богато и живописно. Шалваре дуге до земље, црвene, тамно плаве или маслинaste од фине скрлpet

чоche, свиленим гајтаниom изvezene, а на ногавицама је изraђen орнамент нали на полумесец. Опасивао се са два појаса од свиле. Сивла је био од финог сахијана, изvezen златом, а за сивлом заденут сребрник (кубura оковано сребром) и јатаган.

Јелек, црвен или зелен, од фине кадife са златним пузима, красио му је груди. На глави велики, огроман, фес, са широком свиленом кићанком.

Преко јелека облачио је нурче са широким рукавима, боje уvek као шалваре, и везено свиленим гајтаниom или златом, постава је била од самура, која је oko врата и спреда вирела као перваз, да се види како је унутра скupoteno крзно.

Турак, који је допираo до земље, био је од тамно главе чоche, постavljen лисничном, са златним кићанкама...“

Риста се тако облачио, јер је сматраo да пред турским властима, којима је носио кнежево писмо, он представља Србију.

5G: Evolution or Revolution?

Most of current research and publications dealing with mobile networks address 5G, the fifth generation of mobile networks. But in some cases, 5G has become a buzzword, since nearly every potential technology improvement is said to be one key feature of the next generation of mobile networks. Some operators claim they have already rolled out their 5G network, while others say that a pure throughput increase is just a 4.5G network. Asked about the definition of 5G, anybody will give a different answer.

This talk tries to give an answer to the main question: is 5G a network evolution or a revolution? Based on current research project results from the European 5G Infrastructure Public Private Partnership (5G-PPP), the main requirements and the key architectural features of 5G networks are presented. This includes concepts like small cells, network virtualization, millimeter wave access networks, massive MIMO, Cloud-RAN and software defined networks. Some concepts which are investigated by the 5G-Xhaul and 5G-PICTURE projects, are discussed in detail.

In addition, an overview of currently researched technologies for networks beyond 5G is provided. This includes line-of-sight MIMO, wireless synchronization with picosecond accuracy and localization with sub-millimeter resolution.
